Career Objective

Motivated Computer Science Engineering student with hands-on experience in Python, Machine Learning, Data Analysis, and Web Development. Passionate about exploring AI-driven and technology-based solutions while applying analytical thinking to solve real-world problems. Eager to contribute to innovative projects that promote learning, creativity, and professional growth.

Education

Jaypee University of Information Technology, Solan Bachelor Technology in Computer Science and Engineering	2022-2026 CGPA- 7.32/10
MRA DAV Public School, Solan Senior Secondary Education (Central Board of Secondary Education)	2022 Aggregate- 75%

Internship Experience

Frontend Development Intern- Ziion Technology, Mohali Worked as a Frontend Developer where I focused on building and customizing responsive landing pages using HTML, CSS, and JavaScript. I put special attention into making the designs visually engaging, user-friendly, and consistent across all screen sizes and devices, aiming to create smooth and enjoyable experiences for users.	06/2025 - 07/2025 (6 Weeks)
Web Development Intern- Ziion Technology, Mohali Worked as a web development intern to provide landing page customization for the company’s clients. Used Python to handle backend logic, API integration, and server-side functionality.	06/2024 - 07/2024 (6 Weeks)

Projects

Racism and Misogyny Detection in Memes and Mitigation -Description: - Developed a system to detect racist and misogynistic memes using NLP and Image Processing. The project aims to analyze memes, classify harmful content, and can help to prevent their spread online. - The system collects memes from various social platforms through automated web scraping, extracts text from images using OCR, and applies NLP techniques to classify misogynistic or racist content. Image processing methods analyze visual elements, while asynchronous processing enhances efficiency. -Tech Stack: Python, BeautifulSoup, Selenium, NLP, OCR (pytesseract), Pandas, PIL (Pillow).	01/2025-05/2025
Multimodal AI for Early Mental Health Detection -Description: Developed a multimodal AI system for early detection of mental health conditions using text, speech, and facial expression data. Integrated BERT for text sentiment analysis, LSTM with MFCC features for speech emotion recognition, and CNN-based facial emotion recognition to capture behavioral indicators. Combined features using a weighted fusion approach to classify mental states such as Stress, Anxiety, Depression, and Normal, supporting timely mental health assessment and intervention. -Tech Stack: Python, TensorFlow, OpenCV, Librosa, LSTM, CNN, BERT, Flask.	08/2025-05/2026

Skills

- Languages:** Python, C, C++
- Web Development:** HTML, CSS, JavaScript
- Database:** MySQL
- Tools & Platforms:** Visual Studio Code, Google Colab, Flask, GitHub, XAMPP
- Soft Skills:** Quick Learner, Problem-Solving, Communication, Teamwork, Adaptability, Time Management
